

# TECHNICAL LETTER—ROOFING UNDERLAYMENTS USED WITH THERMAL INSULATION AND AIR BARRIERS IN VENTED AND UNVENTED ATTIC ASSEMBLIES

---

Protecto Wrap Company roofing underlayments can be used in systems that incorporate thermal insulation systems and air barrier systems such as ICYNENE®. Protecto Wrap roofing underlayments are considered air/vapor barriers and are complete waterproofing systems. Vented attic and Unvented attic assembly systems should follow the specific insulation/air barrier systems installation and design recommendations. Special considerations should be used when designing these systems to accommodate the conditioning of the air space or proper ventilation of the air space. Mechanical air exchange units may be required to ensure proper ventilation and function and additional vapor barriers may be needed in certain locations within the design to function properly. Protecto Wrap Company recommends consulting with the system manufacturer and or architect/mechanical engineer for proper design and use.

Protecto Wrap Company provides the information here based on knowledge and data considered to be true and accurate at the time of publication, and is offered for the user's consideration, verification and investigation. Protecto Wrap Company does not warrant the results to be obtained or the appropriateness of the offering for the user's particular project. It is the sole responsibility of the user to read and understand all statements, recommendations or suggestions regarding conditions of sale. No statement, suggestion or recommendation herein is intended for any use that could infringe on any copyright or patent. These products may be covered by patents or patents pending. Copyright 2008.
